XP Energy™ 38AW-R / 80AW-R
For residential and light commercial applications

SPLIT WALL-HUNG AIR-TO-WATER HEAT PUMP

WITH R32 REFRIGERANT

AIR-TO-WATER SPLIT HEAT PUMP - R32 - 38AW-R / 80AW-R

XP ENERGY 38AW-R / 80AW-R

THE NEW RANGE OF AIR-TO-WATER SPLIT WALL-HUNG HEAT PUMPS

XP Energy split heat pumps are designed to provide heating, cooling and domestic hot water. Available in 10 power sizes, they offer a wide choice of single-phase models from 4 to 16 kW and three-phase models from 12 to 16 kW.

Thanks to the compressor with DC Inverter technology, they offer a heating temperature of up to 65 °C. On-board control as standard allows easy management of different functions.

XP Energy

**ONE RANGE,
MULTIPLE APPLICATIONS**
Individual
HousingCollective
HousingLight
Commercial**Year-round comfort**

XP Energy split heat pumps can be used at a wide range of outdoor air temperatures. In heating mode, they can operate **from -25 °C** outdoor air temperature, in cooling mode **up to +43 °C** and for domestic hot water from -5 °C to + 43 °C outdoor air temperature.

Efficient performance

All sizes of XP Energy split heat pumps offer **energy class A+++** for heating (air 7 °C, water 35 °C) and can reach a central heating temperature of up to 65 °C.

Quiet operation

The product's design optimization for low noise levels means that the unit's **standard sound power level starts from 56 dB(A) (outdoor unit) and 38 dB(A) (indoor unit)** with a silent mode that can be activated by the user.

Compact Design

The XP Energy system includes a compact indoor unit (**only 270 mm deep**), which offers an effective solution either to replace a wall-hung gas boiler or for new housing.

Environmentally sustainable

R32 refrigerant (GWP=675) helps protect the environment and meets the greenhouse emissions phase-down requirements.

Wide range

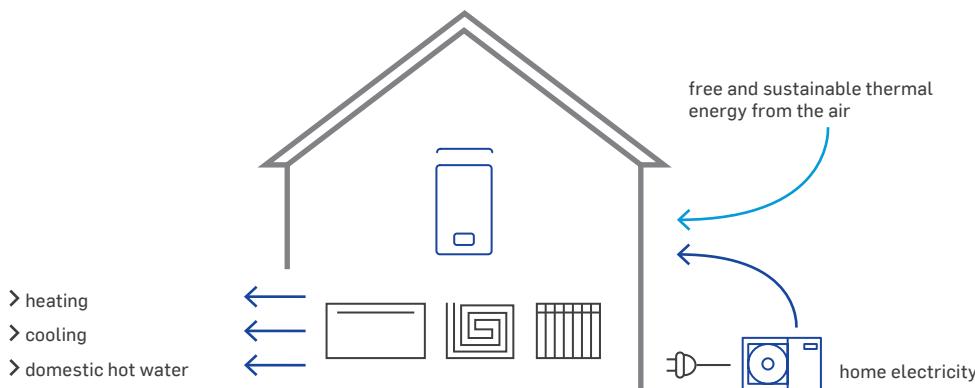

Large choice of single-phase models from 4 to 16 kW and three-phase models from 12 to 16 kW.

AIR-TO-WATER SPLIT HEAT PUMP - R32 - 38AW-R / 80AW-R

HOW DOES XP ENERGY WORK?

XP Energy is an air-to-water split heat pump that harnesses thermal energy from the air, a renewable and free source, by extracting it through the outdoor unit, and domestic electricity to provide year-round comfort, producing heating, cooling, and domestic hot water.

Thermal energy from the air is transferred via an inverter compressor and the refrigerant gas to the water for DHW use, as well as the circuit water of the underfloor heating system, fan coil units and radiators.

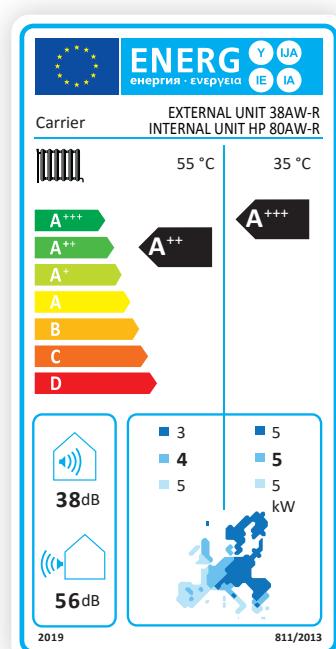

WHY CHOOSE CARRIER HEAT PUMPS?

All sizes of XP Energy appliances offer **energy class A+++** for heating (air 7 °C, water 35 °C) and can reach a central heating temperature of up to 65 °C.

XP Energy is also a **flexible choice** since the unit can adapt to a variety of applications, both residential and light commercial.

Finally, if you are looking for a **comfort solution all year round**, XP Energy can be used at a wide range of outdoor air temperatures. In heating mode, it can operate from -25 °C outdoor air temperature, in cooling mode up to +43 °C and for domestic hot water from -5 °C to +43 °C.

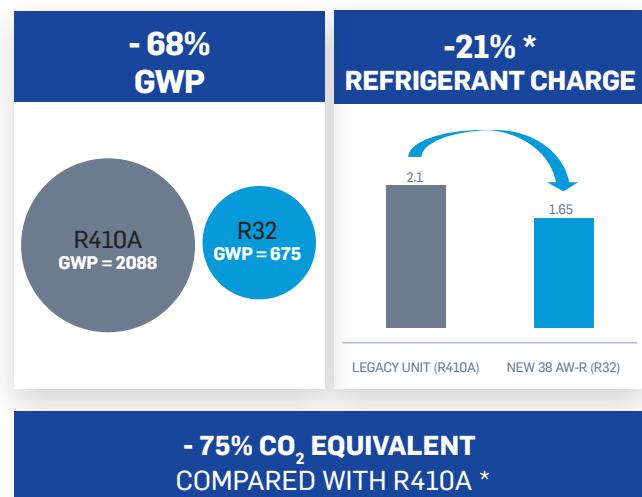

AIR-TO-WATER SPLIT HEAT PUMP - R32 - 38AW-R / 80AW-R

CHOOSING R32 MEANS: HELPING TO PROTECT THE ENVIRONMENT

Carrier has opted for R32 refrigerant to replace R410A in commercial chillers and heat pumps using scroll technology. This choice has now been extended to air-to-water heat pumps using twin rotary compressors. In both cases, R32 was chosen for its lower environmental impact, high energy efficiency, wide availability and ease of use.

R32 refrigerant helps the new XP Energy split air pumps to operate more sustainably thanks to lower Global Warming Potential (GWP), and the lower charge volume means reduced CO₂ emissions.

With zero ozone depletion potential (ODP), R32 offers an excellent solution for heat pumps.

*comparison made on 8 kW model

QUIET OPERATION

The low noise level is achieved thanks to the product's design, and can be reduced by up to 39 dB(A)* when the user activates Silent Mode.

*sound pressure of 4 kW size model in Silent Mode 2

ONBOARD CONTROL AS STANDARD

The onboard control system is supplied as standard with each heat pump split system indoor unit.

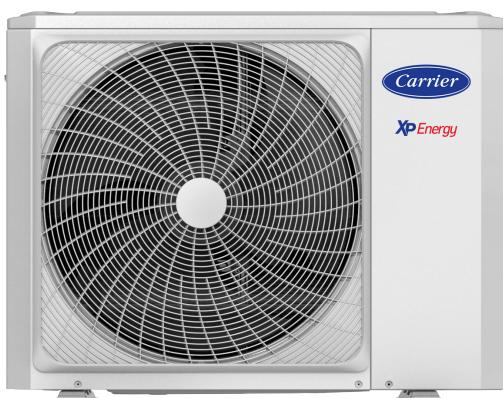

It is easy to navigate and enables you to activate all the available functions, including "Antifreeze" and "Holiday", and set a weekly program for home comfort management.

The large backlit display features intuitive icons that simplify reading, which is also made easier thanks to the multi-language menu.

AIR-TO-WATER SPLIT HEAT PUMP - R32 - 38AW-R / 80AW-R

KEY FEATURES

XP Energy

4-6 KW

8-16 KW

- › **INVERTER CONTROL BOARD** - maximises power under critical load conditions and offers stability and efficiency at partial loads
- › **AISI 316 STAINLESS STEEL PLATE HEAT EXCHANGER** - protected with closed-cell anti-condensation insulation to offer high heat exchange efficiency
- › **OPERATING PARAMETER CONTROL BOARD** - constantly analyses room and water temperature to activate the various components and meet demand
- › **ELECTRONIC EXPANSION VALVE** - optimises the refrigerant flow
- › **TWIN ROTARY COMPRESSOR** - the Inverter System design including the twin DC rotary compressor, fan motor and pump ensures precise control of the motor speed for the right power to match the actual load and save energy
- › **FAN** - special design of the blade and its edge optimises the flow surface, improving efficiency and reducing fan noise
- › **HEAT EXCHANGE BATTERY** - with extended surface area and aluminium wings

AIR-TO-WATER SPLIT HEAT PUMP - R32 - 38AW-R / 80AW-R

INSTALLATION FLEXIBILITY

XP Energy, characterised by a compact indoor unit, represents a sound solution either to replace a wall-hung gas boiler or for new housing. In colder climates, the gas boiler can provide an auxiliary heat source.

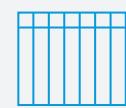

TERMINAL UNITS

fan coils

floor heating

radiators

AIR-TO-WATER SPLIT HEAT PUMP - R32 - 38AW-R / 80AW-R

YEAR-ROUND COMFORT

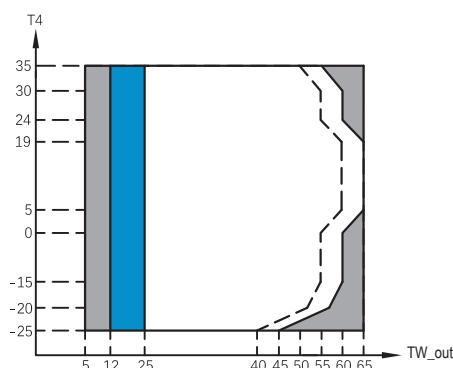

The XP Energy heat pump range can be used at a wide range of outdoor air temperatures.

As shown in the graphs, in heating mode it can operate from -25 °C outdoor air temperature, in cooling mode up to +43 °C and for domestic hot water from -5 °C to +43 °C.

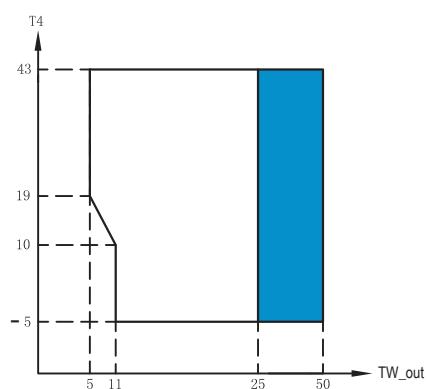

HEATING MODE

The maximum water flow temperature (T_{W_out}) that the heat pump can reach at different outdoor temperatures (T_4) is listed below:

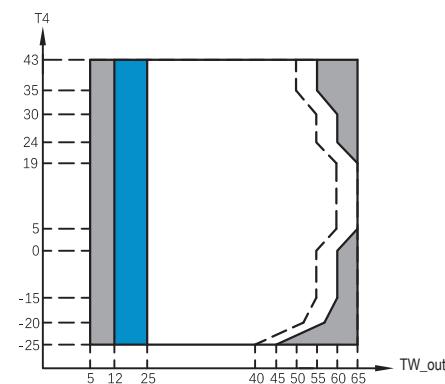

COOLING MODE

DHW MODE

The maximum water flow temperature (T_{W_out}) that the heat pump can reach at different outdoor temperatures (T_4) is listed below:

Operating limits

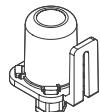

- Operating range only with gas boiler or electric resistance
- Operating range via heat pump with possible limitation and protection
- Maximum water inlet temperature line for heat pump operation

T_{W_out} : water flow temperature

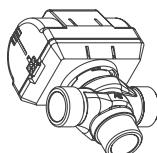

T_4 : outdoor air temperature
